

## **Assembly of the Starry Night 19" and 28" Stars**

### **Materials**

You will need five "star points", one strand of white LEDs, and five to seven zip ties (ten included- five used for the star, and two if attaching it to a Starry Night).

### **Creating the star's frame**

Each of the five "points" of a star are separate pieces. The two corners on the base of each star point are snaps, one being a male end and the other a female end. The male end of a star point will fit into the female end of another star point.

Begin by snapping two star points together. Attach another point to the existing structure and repeat until all five star points are connected, forming the star. Fortify these connections with zip ties between each junction.

### **Adding lights to the star**

The starting point for combining the star's frame with the light strand is important as it will be the "bottom" of the star. This end will have the electrical plug extending from it and will be attached to either your Starry Night tree's box, an extension cord, or directly to a wall outlet.

For a 28" star, begin with the very last bulb on the strand.

For a 19" star, begin with the third bulb from one end of the strand.

Which end of the strand does not matter, as they will form a loop around the star's frame, and both ends of the strand will wind up hanging from the same spot. Starting at the junction between two star points, affix this bulb into one of the two closest anchor points. Again, which star point's leg you start with does not matter- you will end at the other closest anchor point.

Sequentially begin snapping lights into anchor points, working from the junction to the tip of the star, then back down from the tip to the next junction. Continue this process until all lights are snapped into all anchor points on each point of the star. This process will end at the other side of the junction from where it began. 28" stars will use all fifty bulbs in the strand. 19" stars will have five extra that add to the length of the cord.

### **Display**

Congratulations! You may now display your Starry Night 28" Star. Options for doing so include affixing it to the top of a Starry Night tree, hanging it from a wall, or showcasing it in a window. Plug it in accordingly (see directions for tree if applicable) and once it is receiving electricity it will activate, producing both light and seasonal cheer.

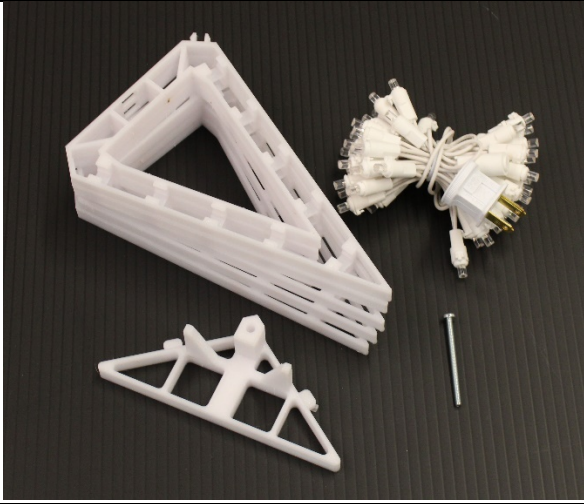

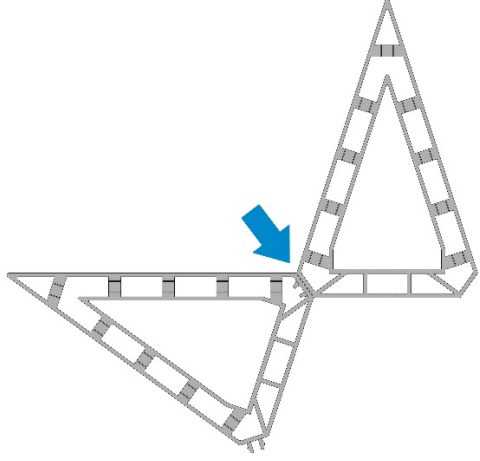

**Enjoy!**

# How to Assemble your StarryNight™ Star

Step 1	Step 2
	
<p>Unpack your kit. Make sure each item in the picture is included.</p>	<p>Begin snapping your star together as shown above. Snap all 5 star corners together.</p>

Step 3	Step 4
	
<p>Place zip ties at the snap locations to further secure your star.</p>	<p>Push center attachment into the two shown above. This attachment mounts your star to the StarryNight box. Add a zip at each blue arrow location.</p>
